

Clinical Physiology Doctor

in Gävle city, Gävleborg county / **SWEDEN**

Description of the work at the actual clinic

The work involves carrying out examinations on patients referred from both primary care and various hospital specialties. The activity is mainly outpatient but also a lot of emergency examinations are carried out.

A number of different types of investigations are performed at the department and most of them relate to the function of heart, blood vessel and lungs. Ultrasound, Exertional ECG, Long-term ECG and lung function tests are commonplace. Clinical Physiology also includes Nuclear Medicine with a large number of different scintigraphs of among others skeletal, heart, thyroid, kidneys, parathyroid etc.

In the department, the examinations are performed, interpreted and responded, but the further follow-up and treatment are the responsibility of the referred doctor.

Number of inhabitants in the catchment area

About 100,000.

Number of employees (trainees, specialists, nurses and other staff)

About 36 people.

Plans for the future (if the business will develop in any particular direction, organizational changes etc.)

Constant attempts at improvement and development, updating of methods and equipment. No specific organizational change is planned in the near future.
