

Back End Engineer Python (SaaS)

Location – remote

SOFTWARE DEVELOPER FULL TIME ANYWHERE

Hello! Are you ready to **Work from Home** and transform your career? We're looking for a Backend Engineer to join the engineering team. Want to help our client's build awesome solutions to accomplish their goals and vision? Are you interested in working from home with some of the best talent? Then keep reading.

About You

You love building great software and enjoy collaborating in a consultative environment. Your work could be supporting new feature development, migrating existing features, or **creating APIs**.

As an experienced backend **Python** developer with strong coding skills you will design, develop and implement a suite of API's working with existing systems while making contributions towards future architecture.

You have worked with teams before on large and demonstrable projects built in Python with a strong emphasis on object oriented programming, design patterns, common algorithms and relational database system.

Experience with RESTful services, queuing solutions, relational databases, Linux, and server protocols is a plus.

Previous experience with designing architecture for high volume web services, distributed processing along with containerization, **Elastic Stack (rsyslog, Logstash, Elastic Search, Kibana), Redis is a plus**.

You relish creating high quality code from the comfort of your own home on an agile team. Your engineering projects will focus on understanding customers' needs and translating those needs from product specifications into functional, production ready code.

You'll have the opportunity to ship code daily that will be used by customers. You love learning. Engineering is an ever-evolving world. You enjoy playing with new tech and exploring areas that you might not have experience with yet.

You are self-driven, self-learner willing to share knowledge and participate actively in your community. Having overlap with your team is critical when working in a global remote team. The Company requires all team members to overlap with EST morning hours daily. In addition, reliable high speed internet is a must.

Things You Might Do

Our Client is a fast-growing, and remote-first company, so you'll likely get experience on many different projects across the organization. That said, here are some things you'll probably do:

- Give back to the community via open source and blog posts
- Travel and meet great people- as part of our remote-first lifestyle, it's important that we come together as needed to work together, meet each other in person and have fun together. Please keep that in mind when you apply.

- Teach and be taught: The Company creates active teams that work in internal and external projects together, giving opportunities to stay relevant with the latest technologies and learning from experts worldwide
- Interact directly with internal and external clients to represent The Company and its values

The Company offer:

- Competitive compensation
- 100% Remote work (could vary according to the client's needs)
- Travel according to client's needs
- The chance to work side-by-side with thought leaders in emerging tech

Do you have what it takes? Apply today!

About the Company:

The Company is a digital product agency that accelerates digital transformation. We use high performing small teams, emerging technology, and “new school” product development tools and methods to accelerate business outcomes. They support their clients across four core delivery areas: business and product strategy consulting, customer experience, cloud services, and Agile software delivery. Driven by a team of world-class talent, they have been recognized by the Inc. 5000 list of fastest growing private companies 5 years in a row, the Washington Business Journal list of Fastest Growing Companies in the Washington, DC area two years in a row, and a top company for remote work by FlexJobs. We’re also an official partner to Atlassian, AWS, Cloudflare, GitHub, InVision, Ionic Framework, and Vue.js! Based on the model of an open source team, Modites work remotely, and are located across the globe. That’s allowed them to hire the best talent in the world, no matter where they live.
